

Product Information Sheet

Extruded Aluminum Termination Bar PIN # 1121

Item Description

.75" wide x 10' aluminum termination bar
Approx. 2lbs per bar

Product Number

BA-100101, BA-100103

Product Information

Manufactured from specially extruded aluminum without any sharp edges, the flat stock and J-Bar are an ideal fixation bar within the use of single-ply membranes.

Method of Application:

Bars should be installed a minimum of $\frac{3}{4}$ " below the roof edge when using in a horizontal fashion. We always recommend the use of a continuous run of butyl tape, or bead of good quality polyurethane caulk, between the wall and membrane at the line of attachment and penetrations to create a good compressive seal to further protect against water intrusion when being used in a **vertical** fashion. The bars are pre-drilled at 6 inch intervals for optimum fixation

Storage:

Store bars in a horizontal fashion until ready to use. Do not stack heavy items on top of bars to avoid kinks and bends.

Coverage Rates:

10 linear feet per bar

Precautions:

Wear appropriate eye protection when cutting the bars.
